

NORTH TAPPS MIDDLE SCHOOL

“Learning Today for Tomorrow’s Challenges”

April 10, 2008

LightSPEED Technologies,

Serving as principal of North Tapps Middle School for almost 20 years has put me in the position of working with and often times avoiding numerous products and sales consultants. Experience has shown that few products meet the needs of our customers and educators are notoriously tough when it comes to giving out high marks for “innovations” that are purported to improve the quality of the learning experience for students.

I am delighted to say that LightSPEED Technologies classroom amplification systems have far exceeded my expectations and your consultant, Rick Berger is the finest and most professional representative I have encountered during my administrative career. The entire process from purchase to installation occurred smoothly and with very little interruption to teachers or students.

The LightMic™ product that was installed at NTMS has been extremely well received by our teaching staff and students. No longer do teachers strain vocal chords doing verbal Olympics to reach the back row of the class. Our middle school students have responded positively to the amplification system and remind teachers if they forget to use it in their classes. One student was overheard saying that everyone gives attention so much more quickly to the teacher since she has started using the amplification system.

Rick’s support through this process was no less than exceptional. From the start he listened to our needs, responded quickly to requests and made certain to follow up promptly to ensure that our experience was positive.

I give my highest endorsement to the LightSPEED Technologies classroom amplification system and to its capable representative, Rick Berger. School’s that choose to select Rick to install this system will have certainly made a “sound” decision!

Sincerely yours,

Pat Keaton
Principal, North Tapps Middle School
